SUMMARY

Software development graduate with BMW Group experience writing SQL, building Oracle Apex dashboards and turning operational data into reporting managers can act on. Comfortable working from raw logs and defect records to a clear answer. Currently studying data analytics and Power BI through the UT Austin McCombs Data Analytics Essentials program.

RELEVANT EXPERIENCE

BMW Group · Spartanburg Plant, Greer, SC — 2025 – 2026
Quality Specialist · Systems Integration

- Built the SQL back end in Oracle Apex for a drive events scheduling project; found that the existing tables could not support Gantt reporting, proposed restructured tables and identified an external JavaScript library to render the charts.
- Monitored vehicle deployment logs in Kibana and connected anomalies in the log data to defect records for engineering review.
- Tested software clusters on current and upcoming series vehicles; recorded defects in Octane by severity with complete, consistent documentation.
- Reported weekly test status to U.S. and Munich HQ teams and authored Confluence documentation later referenced by BMW teams globally.

BMW Group · Spartanburg Plant, Greer, SC — Jan 2023 – Aug 2023
Software Engineering Intern

- Wrote SQL queries in Oracle Apex and adapted existing SQL from other parts of BMW's internal platform into a new consolidated dashboard, reusing proven logic instead of rebuilding it.
- Migrated an existing Power BI report structure into Oracle Apex so managers could view the data in one place.
- Analyzed KPI data for managers and separated real problems from normal variation, so effort went to genuine issues.

Rochester Institute of Technology · Rochester, NY — 2022 – 2024
Software Developer · GCCIS

- Developed a Node.js, Angular and TypeScript platform for the college covering display screens, calendars, IT ticketing and inventory tracking for network hardware and test devices.
- Queried MySQL and MariaDB databases to retrieve and update data across the platform.
- Designed a reusable, data-driven table component in Angular 15 that any page on the site could call to display records dynamically.

SKILLS

- SQL · MySQL · MariaDB · Oracle DB
- Oracle Apex · Dashboard Development
- KPI Reporting · Data Quality Review
- Kibana · Log Analysis
- Power BI (report logic and migration)
- JSON · XML · Git
- JavaScript · TypeScript · Angular · Node.js
- Confluence · Octane · SAP

EDUCATION

UT Austin McCombs School of Business — In Progress
Data Analytics Essentials Program with Power BI · Online, with Great Learning

Rochester Institute of Technology — 2021 – 2024
B.S. Software Development · Rochester, NY

University of Connecticut — 2019 – 2021
B.S. General Studies · Minor in Computer Science · Storrs, CT
